The invention relates to a variant DNA sequence useful in DNA vaccines The DNA sequence encodes a naturally occurring protein such as C3d white by virtue of third base redundancy and other variations permissible
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              4643
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           nucleotides encoding amino acids 1-32 of the plasmodium vivax merozoite surface protein 1 (MSP1) linked to the nucleotide sequence modding the 19 kD C-terminal fragment (p19) of MSP-1 from plasmodium falciparum. p19 is the C-terminal fragment of the 42 kD MSP1 from Plasmodium species. The recombinant protein can be used for the production of anti-malarial vaccines, where the p19 fragment provides a high level of protective immunity since it includes epitopes not presented in the p42 fragment.
                                                                         Novel variant DNA sequence useful in DNA vaccine, encodes occurring protein and comprises a sequence non-identical toccurring DNA sequence encoding the protein -

The DNA sequence is useful in a DNA immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA sequence encoding a naturally occurring protein into a human or animal by administering the pharmaceutical composition in to the human or animal, where the administration results in a therapeutic effect on the human or animal. The present sequence is plasmodium falciparum prMSP1.19 insert in pUC105-01 vector

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA sequence encoding a naturally occurring protein into a human or animal by administration the pharmaceutical composition into the human or animal, where the administration results in a therapeutic effect on the human or animal. The present sequence is plasmodium falciparum PfMSP1.19-human or animal. The present sequence is plasmodium falciparum PfMSP1.19-human or animal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a variant DNA sequence useful in DNA vaccines. The DNA sequence encodes a naturally occurring protein such as C3d which by virtue of third base redundancy and other variations permissible within an amino acid codon, is non-identical to the naturally occurring DNA sequence encoding that protein. The DNA sequence is useful in a DNA requence according that protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 16; Page 66-68; 87pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              within an amino acid codon, is non-identical to the naturally occurring DNA sequence encoding that protein. The DNA sequence is useful in a DNA immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA sequence encoding a naturally occurring protein into a human or animal by administering the pharmaceutical composition into the human or animal, where the administration results in a therapeutic effect on the human or animal. The present sequence is Plasmodium falciparum PfMSP1.19-human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CDS

The DNA sequence encodes a naturally occurring protein such as C3d which, by virtue of third base redundancy and other variations permissible within an amino acid codon, is non-identical to the naturally occurring DNA sequence encoding that protein. The DNA sequence is useful in a DNA immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA sequence encoding a naturally occurring protein into a human or animal by administering the pharmaceutical composition into the human or animal by administering the pharmaceutics in a therapeutic effect on the human or animal. The present sequence is plasmodium falciparum mutant professions of the form vector pvK104-03.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          4645

The DNA sequence encodes a naturally occurring protein such as C3d which, by virtue of third base redundancy and their variations permissible within an amino acid codon, is non-identical to the naturally occurring DNA sequence encoding that protein. The DNA sequence is useful in a DNA immunisation vector to encode one or more naturally occurring human or non-human proteins with immunomodulatory properties. The DNA sequence is useful for inducing an immune response to an antigen in a human or animal. A pharmaceutical composition is useful for introducing a DNA sequence encoding a naturally occurring protein into a human or animal by administering the pharmaceutical composition into the human or animal. The present sequence is plasmodium falciparum PfMSP1.19-human or animal. The present sequence is plasmodium falciparum PfMSP1.19-human or animal.

                                                                             The sequence represents a DNA encoding the Plasmodium vivax merozoite surface protein (MSP) C-terminal region. The C-terminal region of the merozoite surface protein has a strong antigenicity in malarial diseases. For diagnosis of malaria, recombinant proteins with enhanced antigenicity, obtained by addition of fusion proteins to surface protein C-terminal regions, can be reacted with serum or blood of a Plasmodium infected patient. Antigen-antibody composites will be formed, and these recombinant antigens provide a guick and reliable diagnosis of malaria, with good sensitivity and selectivity.
                                                                                                                                                                                                                                                                                                                                                                                                     15-NOV-1999;

                                                                                                                                                                                          CC immunogenic merozoite surface antigen-1 peptide that is used in a malaria CC immunogenic merozoite surface antigen-1 peptide (MSA-1), and a CC mammalian signal (AAW34595-96) and/or anchoring sequence encoding an CC The signal peptide contains 3 regions, a first or c region at the CC carboxy end of the peptide which serves as the cleavage site for a CC signal peptidase enzyme, a second or h region which is N-terminal to the c region (and highly hydrophobic), and a third region or n region. CC the c region (and highly hydrophobic), and a third region or n region. CC anchor peptides), particularly in the form of recombinant vaccinia crirus, are used in vaccines to prevent or treat malaria caused by Plasmodium falciparum. The chimeric proteins can also be used in vaccines con generating a long-lasting immune response (humoral and/or cell-mediated) against the merozoite form of the parasite, in tumans or other animals.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                      stage major merozoite surface antigen (MSP-1) immunogenic peptide, cpl15MSP-1 (see AMS0527). The invention relates to a malaria vaccine comprising an expression vector, preferably a defective venezuela equine encephalitis (DVEE) viral vector system, which expresses pl15MSP-1 or its immunogenic fragment raises a humoral and/or cell-mediated response to the erythrocytic merozoite malaria antigen, protecting the patient from a subsequent malaria infection. The DVEE viral vector system continues to express antigen in the patient for a pariod of days, months or even years. Inclusion of a signal peptide and/or an anchor peptide sequence in the p115MSP-1 antigen produces an immunogenic response which is significantly (i.e. at least about 2 times and as much as 100 times or more) greater than the immunogenic response produced by p115MSP-1 which does not contain the signal or anchor peptide sequence.
   Matches 124;
                                                               Sequence 165 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel vaccine for immunizing mammals against plasmodium falciparum infection, comprises a viral vector system expressing protein corresponding to specific domain of major merozoite surface protein of plasmodium falciparum,
                                                                                                                                                                                                                                                                                                                           The present sequence is that of DNA encoding a typical mammalian signal peptide sequence (see AAM50529). Such a signal peptide sequence may be incorporated into chimeric proteins of the invention that also include the plasmodium falciparum erythrocytic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Merozoite surface antigen; 1; MSP-1; pl15MSP-1; antigen; immu malaria; vaccine; Venezuela equine encephalitis virus; DVEB; vector; immunisation; Plasmodium falciparum; signal peptide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAI70929 standard;

                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL016176-ABL30511), expressed DNA sequences (ABL016176-ABL30511).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

                                                                                                                                                                                                                  AAQ87587-89 encode polypeptides having a whole or partial epitope of a structural protein of Leucocytozoan protozoa (see AAR70491-93). The polypeptides and DNA encoding them are useful in the production of vaccines for the treatment of leucocytozoanosis of fowl.

(I) is especially useful in the treatment, prevention and reduction of malarial infection, as research or diagnostic reagents for the detection of Plasmodium species in a biological sample, and for conferring immunity against multiple stages of the malarial parasite. The antibodies produced are useful for the detection or measurement of antigenic epitopes derived from one or more stages in a life cycle of a parasite, particularly P. vivax. The vaccine comprising the recombinant proteins, is cost-effective, health-promoting intervention for controlling, preventing or treating the incidence of malaria. The present sequence represents a synthetic gene vivacle encoding the recombinant protein vivacle, a multivalent and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 cc determinants, fragments or conservative substitutions, derived from more ct than one stage in a life cycle of a plasmodium vivax parasite. (I) is cuseful as a vaccine for stimulating an immune response, specifically a cc protective immune response that confers increased resistance to infection the plasmodium parasites, such as P. vivax. (I) is especially useful in cc the treatment, prevention and reduction of malarial infection, as cc research or diagnostic reagents for the detection of plasmodium species in a biological sample, and for conferring immunity against multiple cc stages of the malarial parasite. The antibodies produced are useful for the detection or measurement of antigenic epitopes derived from one or cc more stages in a life cycle of a parasite, particularly P. vivax. The core stages in a life cycle of a parasite, particularly P. vivax. The cc vaccine comprising the recombinant proteins, is cost-effective, health-cc incidence of malaria. The present sequence represents a synthetic gene cc vivac2 encoding the recombinant protein vivac2p, a multivalent and cmultivalent and

                                                                                                                                                           Also described are: (1) numbertide sequences (11) encoding (1); and (2) (2) vaccines against P. falciparum infection comprising (1) or (11). (2) (1) and (11) are useful for the development of vaccines against CC (1) and (11) are useful for the development of vaccines against CC P. falciparum infection. (1) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (1), are useful in the detection of infection with P. falciparum. Furthermore, (1) (especially when they are rifins or secreted or membrane proteins) CC (1) (especially when they are rifins or secreted or membrane proteins) CC (1) (especially when they are rifins or secreted or membrane proteins) CC can aid the identification of drugs to treat or prevent P. falciparum CC infection, or they can be used to identify drug resistance in the p. falciparum CC infection, or they can be used to identify drug resistance in the composition of proteins encoded by it will help to expand CC understanding of parasite biology, a process hampered by the CC complexity of the parasite lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many C parts of the world, and there is a pressing need for vaccines and new AMATORR to AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMATORR and AMAT

P
This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The meth is used: (1), for diagnosis and/or prognosis of side effects of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determining the degree of cytosine methylation in genomic DNA, for diagnosis and prognosis, comprises selective hybridization amplicons from chemically treated DNA -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-SEP-2000; 2000DE-1043826

therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory systems etc., particularly by detecting mutations or single nucleotide polymorphisms (SNP's); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously. ABG13410-ABG54121 represent genomic DNA sequences used to illustrate the method for determining the degree of cytosine methylation described in

The sample is treated chemically to convert CC genomic sample of DNA. The sample is treated chemically to convert CC cytosine (C) but not methylated C, to uracil, then part of the genomic CC The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers CC and the degree of hybridisation to both classes is determined from the CC label on the amplicon. From the ratio of labels hybridised to the two CC classes of oligomers, the degree of methylation is calculated. The method is used: (1) for diagnosis and/or prognosis of side effects of CC is used: (1) for diagnosis and/or prognosis of side effects of CC therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders CC systems etc., particularly by detecting mutations or single nucleotide cystems etc., particularly by detecting mutations or single nucleotide cytoes and for investigating call differentiation. The method allows the CC methylation status of many C residues to be determined simultaneously.

CC ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate the control of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         맑
                       cc methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic CDNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one come commence common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common common

                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention describes a novel method for determining the degree of methylation of a particular cytosine in a motif 5'-CpG-3', present in a genomic sample of DNA. The sample is treated chemically to convert cytosine (C) but not methylated C, to uracil, then part of the genomic DNA that contains the target C is amplified to form a labeled amplicon. The amplicon is hybridised to two classes, each with at least one member, of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the degree of hybridisation to both classes is determined from the label on the amplicon. From the ratio of labels hybridised to the two classes of oligomers, the degree of methylation is calculated. The method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                drug; side effect; cancer; central nex
gastrointestinal; respiratory system;
SNP; cell differentiation; ds.
                                                    ABQ13410-ABQ54121 represent genomic DNA sequences used to illustrate t method for determining the degree of cytosine methylation described in the disclosure of the invention.
                                                                                                                                                                            systems etc., particularly by detecting mutations or single nucleotide polymorphisms (\mathsf{SNP'S}); and (ii) for differentiation of cell or tissue types and for investigating cell differentiation. The method allows the methylation status of many C residues to be determined simultaneously.
                                                                                                                                                                                                                                                                                                                           is used: (i) for diagnosis and/or prognosis of side effects of therapeutic drugs and of a wide range of diseases, e.g. cancer, disorders of the central nervous, cardiovascular, gastrointestinal and respiratory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Determining the degree of cytosine methylation in genomic DNA, useful for diagnosis and prognosis, comprises selective hybridization of amplicons from chemically treated DNA -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; cytosine methylation; 5'-CpG-3'; uracil; cytosine; diagnosis; drug; side effect; cancer; central nervous system; cardiovascular; gastrointestinal; respiratory system; single nucleotide polymorphism
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 12; 56pp + Sequence Listing; 56pp; German.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2002-371829/40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-SEP-2000; 2000DE-1043826

stimulate an immune response to Plasmodium vivax. [1] comprises antigenic conterminants, fragments or conservative substitutions, derived from more than one stage in a life cycle of a Plasmodium vivax parasite. [1] is cuseful as a vaccine for stimulating an immune response, specifically a protective immune response that confers increased resistance to infection by Plasmodium parasites, such as parasite. It is especially useful in the treatment, prevention and reduction of malarial infection, as cresearch or diagnostic reagents for the detection of Plasmodium species in a biological sample, and for conferring immunity against multiple stages of the malarial parasite. The antibodies produced are useful for the detection or measurement of antigenic epitopes derived from one or correction for controlling, preventing or treating the recombinant proteins, is cost-effective, health-correction intervention for controlling, preventing or treating the controlling, preventing or treating the controlling, preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating the controlling preventing or treating

This gene has silencing activity. The qde-1 gene was isolated by mutational analysis of an al-1 transgenic strain. This strain had an albino phenotype resulting from post-transcriptional silencing of the endogenous al-1 gene. Reversion of this phenotype indicated a mutation in a silencing gene. The silencing gene, qde-1, could then be isolated. Modulation of qde-1 expression may be used to inactivate genes and to silence

The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention provides a number of human immune system associa genes which are modified by the methylation of cytosines. The sequence can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory, ulcerative bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid comprising fractor diagnosis and treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               30-JUN-2000;
01-SEP-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             acute myeloid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to the GP900 glycoprotein of the protozoan cryptosporidium parvum, DNA encoding it, GP900 fragments, and fusion proteins comprising GP900 fragments. The invention also relates to the administration of GP900 or fragments thereof to a host to elicit anti-GP900 antibody production, and to a method of cryptosporidiosis treatment or prophylaxis comprising administration of anti-GP900 antibodies to an individual. Cryptosporidium parvum GP900 and GP900 fragments are able to competitively inhibit sporozoite or merozoite attachment or invasion, and
                                                                                                                                                                                                                                                                                                   agriculture. GP900 fragments, fusion proteins and antibodies may also used for the diagnosis of Cryptosporidium parvum infections, and for t detection of the parasite in the environment. The present sequence represents the open reading frame (ORF) encoding a portion of the GP90 protein of the NINC isolate of Cryptosporidium parvum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       competitively inhibit sporozoite or merozoite attachment or invasion, and are also useful for the generation of anti-GP900 antibodies. The antibodies also inhibit sporozoite or merozoite attachment/invasion and additionally inhibit the binding of GP900 ligands to GP900. GP900 proteins, fragments and antibodies may therefore be used to treat or

Infection with Cryptosporidium is a common cause of diarrhoea in humans and causes life-threatening diarrhoea in immunocompromised persons. Cryptosporidiosis can be contracted from contaminated municipal water supplies (e.g., public swimming pools). It is also a cause of disease in animals, resulting in financial losses in a cause of disease in animals, resulting in financial losses in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      RESULT
                   The present invention relates to a method of detecting Cryptosporidium biological and environmental samples, and of diagnosing cryptosporidiosis. This involves obtaining a sample and contacting it with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNA, or its variant, mutant or fragment. The method is also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 4470
                                                                                                                                      Detecting Cryptosporidium in biological and environmental samples and diagnosis of cryptosporidiosis involves, contacting the sample with Cryptosporidium GP900, P68 or cryptopain antigen, antibody, DNA or RNJ

                                                                                                                                                                                                                            Cryptosporidium parvum, DNA encoding it, G9900 fragments, and fusion CC proteins comprising GP900 fragments. The invention also relates to the CRYptosporidium parvum, DNA encoding it, G9900 fragments, and fusion CC groteins comprising GP900 or fragments thereof to a host to elicit anti-
CC GP900 antibody production, and to a method of cryptosporidiosis treatment CC individual. Cryptosporidium parvum GP900 and GP900 fragments are able to CC competitively inhibit sporozoite or merozoite attachment or invasion, and CC are also useful for the generation of anti-GP900 antibodies. The CC antibodies also inhibit sporozoite or merozoite attachment /invasion and CC antibodies also inhibit sporozoite or merozoite attachment/invasion and CC additionally inhibit the binding of GP900 ligands to GP900. GP900 CC proteins, fragments and antibodies may therefore be used to treat or CC cause of diarrhoea in humans and causes life-threatening diarrhoea in CC immunocompromised persons. Cryptosporidiosis can be contracted from CC contaminated municipal water supplies (e.g., public swimming pools). It is also a cause of disease in animals, resulting in financial losses in CC agriculture. GP900 fragments, fusion proteins and antibodies may also be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       13-SEP-1996;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                detecting and identifying individual Cryptosporidium isolates based on
the genetic characteristics, and for diagnosis of prior or concurrent
Cryptosporidium infection. The present sequence is a C. parvum coding
sequence used in the exemplification of the invention.
                                                                                                                                      The present invention relates to a method of detecting Cryptosporidium biological and environmental samples, and of diagnosing cryptosporidiosis. This involves obtaining a sample and contacting it
